

The development of the TIGER HAD Mark II standard has been launched by OCCAR (Organisation Conjointe de Coopération en matière d'Armement) on behalf of France with the signature of the relevant contracts between OCCAR, Airbus Helicopters TIGER and TDA Armements on 15 December 2016.

These contracts will cover the Development, Production and Support activities necessary to upgrade a fleet of 24 French HAD to the Mark II configuration. The first delivery is foreseen for mid 2020. The production will last until end of 2023.

This standard will provide new capabilities to the French TIGER HAD helicopters such as:

- [Induction Laser Guided Rockets](#) (« Aculeüs LG«) developed by TDA
- A new GPS receiver (SAASM) and CRPA antenna system developed by THALES.
